

ABSTRACT OF THE DISCLOSURE

A method of establishing a color image space model including the steps of: (a) setting a standard color card containing a series of reference colors for use as a color data bank, and then
5 setting a table of relative adjectives; (b) setting a color comment questionnaire subject to the standard color card and table of relative objectives thus obtained; (c) selecting at least one particular group people to make an investigation subject to the set color comment questionnaire, and then collecting and arranging the
10 investigation result thus obtained so as to set up effective statistic data; and (d) using an analysis mode to compute the effective statistic data thus obtained, so as to establish a specific color image space model.
